

# KPP Folder Summary

Contents of **Desktop\KPP** — K.P. Paramathman & Brothers Tax Invoice Portal • Generated 23 August 2026

---

## 1. What This Folder Is

The folder holds a self-contained, browser-based **GST Tax Invoice Portal** built for **K.P. Paramathman & Brothers**, a hand-loom silk saree manufacturer in Kilpattu, Tamil Nadu (GSTIN 33BMXPP5419A1ZX). It's a single-page web app — no server or database — that an admin logs into, fills out an invoice form for, and exports as a pixel-accurate PDF matching the company's official printed invoice template. Alongside the app are the original template files it was built to match, the brand's logo and letterhead artwork, and one unrelated personal file.

## 2. File Inventory

| File                             | Type        | Size   | What it is                                                                                                                                     |
|----------------------------------|-------------|--------|------------------------------------------------------------------------------------------------------------------------------------------------|
| index.html                       | App         | 41 KB  | The single HTML page: admin login screen + the 6-step invoice editor + live A4 preview.                                                        |
| script.js                        | App         | 59 KB  | All app logic — login, client/product/bank databases, form handling, tax calculation, default seal & signature generation, PDF/print triggers. |
| generateInvoicePDF.js            | App         | 38 KB  | Dedicated jsPDF engine that redraws the invoice as vector PDF using coordinates measured directly from the official template.                  |
| style.css                        | App         | 49 KB  | All visual styling for the login screen, editor panels and the printable invoice sheet.                                                        |
| invoice_template.pdf             | Reference   | 1.6 MB | The company's official blank invoice layout — the master reference the app's PDF output is matched against.                                    |
| invoice_template_watermarked.pdf | Reference   | 1.6 MB | Same template with the KPP monogram watermark visible, used as the background-placement reference.                                             |
| invoice_template.docx            | Reference   | 626 KB | Word version of the same invoice template.                                                                                                     |
| logo.png                         | Brand asset | 9.8 MB | Full company logo, full resolution (large master file).                                                                                        |
| logo_navbar.png                  | Brand asset | 816 KB | Logo sized for the app's top navigation bar.                                                                                                   |
| only_logo.png                    | Brand asset | 3.7 MB | Logo mark only (no text), high resolution.                                                                                                     |
| only_logo_B.png                  | Brand asset | 1.1 MB | Alternate version of the logo mark, used behind the login screen.                                                                              |
| watermark_kpp.png                | Brand asset | 332 KB | Faint KPP monogram used as the invoice sheet's background watermark.                                                                           |
| vinayagar.png                    | Brand asset | 160 KB | Lord Vinayagar (Ganesha) image printed at the top-left of every invoice.                                                                       |
| vinayagar_2.png                  | Brand asset | 160 KB | Duplicate of vinayagar.png (identical file size).                                                                                              |
| Vinayagar.jpg                    | Brand asset | 691 KB | JPEG version/source of the same Vinayagar artwork.                                                                                             |

| File                                          | Type                 | Size  | What it is                                                                                                                    |
|-----------------------------------------------|----------------------|-------|-------------------------------------------------------------------------------------------------------------------------------|
| <code>squarespace_backup_codes_....txt</code> | Personal / sensitive | <1 KB | Two-factor authentication backup codes for a Squarespace account. Unrelated to the invoice app — see the security note below. |

### 3. What the Invoice App Does

Opening `index.html` loads a demo admin login (credentials are visible in the page itself: admin / admin123). Once signed in, the portal walks through six sections to build one invoice:

- 1 Invoice Details & Copy Type** — invoice number, date, copy type (Original/Duplicate/Triplicate), reverse charge flag.
- 2 Details of Receiver** — billed-to name, address, GSTIN, phone; can auto-fill from 7 pre-loaded sample clients (e.g. Sri Lakshmi Silks, RMKV Silks, Nalli Chinnasamy Chetty).
- 3 Supply & Transportation** — state/state code, transport mode, vehicle number, date and place of supply.
- 4 Product Items List** — up to 15 saree line items (name, HSN code, meter, qty, rate); a built-in catalogue of 10 saree types offers auto-fill.
- 5 Tax, Discount & Financials** — discount, CGST/SGST/IGST percentages, auto-calculated tax and totals, amount auto-converted to words.
- 6 Bank, Watermark, Seal & Signature** — choose from 4 pre-loaded bank accounts (SBI, Indian Bank, HDFC, Canara), toggle the watermark and terms & conditions, and toggle/upload a custom e-seal and e-signature (a default round stamp and cursive signature are auto-generated on a canvas if none is uploaded).

A live A4 preview mirrors the final bill as it's filled in. The **Download PDF** button calls `generateInvoicePDF.js`, which redraws the entire invoice as vector graphics using coordinates measured directly from the official template (falls back to an `html2pdf` screenshot-style export if `jsPDF` fails). Print and “Fit Page” controls are also provided.

#### Two things worth flagging:

- The admin login is entirely client-side — the username/password (admin / admin123, also kpp2026) sit in plain text inside `index.html` and `script.js`, visible to anyone who views the page source. That's fine for a local demo but shouldn't be relied on if this is ever hosted publicly.
- `squarespace_backup_codes_moganjana711@gmail.com.txt` contains live 2FA backup codes for a Squarespace account. It has nothing to do with the invoice app and, because each code is a one-time credential, this summary does not reproduce them — consider moving that file somewhere more secure than a shared project folder.

### 4. Company Details Embedded in the App

|                  |                                                                                                 |
|------------------|-------------------------------------------------------------------------------------------------|
| Business name    | K.P. Paramathman & Brothers                                                                     |
| Line of business | High Class Hand-Loom Silk Saree Manufacturers                                                   |
| Address          | #97, Gangaiyamman Koil Street, Kilpattu – 606 907, Polur Tk. (Via) Arani (Tvm. Dt.), Tamil Nadu |
| GSTIN            | 33BMXPP5419A1ZX                                                                                 |
| Phone            | 9952446177 / 9600686854                                                                         |
